

Andrea

Adecco

COMPUTER ENGINEER · CYBERSECURITY SPECIALIST · IT RESEARCHER

 May 17, 1999

Professional Summary

Recent Master's graduate in Cybersecurity with experience in designing security solutions for 5G/6G networks and conducting vulnerability research. Skilled in developing containerized microservices with Kubernetes and implementing network functionalities in Go, including TLS configurations. Familiar with open-source 5G frameworks (Free5GC, UERANSIM, OpenAirInterface, Open5GS), messaging brokers (MQTT, RabbitMQ), and MLOps tools. Interested in applying DevOps and network security expertise to telecommunications challenges.

Education

University of Pisa

Pisa, Italy

LM-66 - MASTER'S DEGREE IN CYBERSECURITY

2023 - April 2026

- **Final Grade:** 110/110
- **Thesis Title:** AI-driven Zero Touch Security against MitM attacks in 5G Networks
- **Supervisor:** Rosario Giuseppe Garroppo
- Designed and implemented a containerized microservices solution on Kubernetes for detecting MitM attacks in 5G/6G networks.
- Validated the system within an integrated testbed using open-source 5G core (Free5Gc) and emulated UE/RAN (UERANSIM).
- **Date of Graduation:** 15/04/2026

University of Florence

Florence, Italy

L-8 - BACHELOR'S DEGREE IN INFORMATION ENGINEERING

2018 - April 2023

- **Final Grade:** 93/110
- **Thesis Title:** CyberSecurity and Mobile Networks
- **Supervisor:** Tommaso Pecorella
- **Date of Graduation:** 27/04/2023

Experience

IT Researcher Intern

Pisa, Italy

NEXTWORKS S.R.L.

Oct 2025 - Mar 2026

- Conducted research activities focusing on security systems for 5G networks.
- Analyzed vulnerabilities and attack scenarios, specifically Man-in-the-Middle (MitM) attacks.
- Developed and validated AI-driven solutions for automated security.
- Collaborated on a Proof of Concept (PoC) for the MARE 6G European project.

Projects

5G Laboratory Network Testbed

UNIFI, Pisa

RESEARCHER

Academic Project

- Built and deployed a functional 5G network within a Linux-based laboratory environment.
- Configured and operated Software-Defined Radio (SDR) hardware using USRP B210, integrated with open-source 5G software stacks including OpenAirInterface and Open5GS.
- Successfully identified, analyzed, and exploited a vulnerability within the Radio Resource Control (RRC) setup procedure.

Skills

Programming Languages	Python, Go, C++, C, PHP, JavaScript
Spoken Languages	Italian (Native), English (B2)
Tools	WireShark, Burp Suite, git, Visual Studio
Techonologies	Linux, Docker, Kubernetes, Virtualized Environments
Networking	5G Networks, Architectures and Protocols, Network Security
